

TRANSFORMATION WITH DIRECTION

A vertically integrated Mexican industrial platform.
From raw copper to energized solutions —
all under one roof. —

CORPORATE
PRESENTATION

CORE • FORM • FLOW • CYCLE

WHO WE ARE

WE ARE BORN FOR TRANSFORMATION.

For years, we have been a company with talent and skilled hands, but without our own voice in the market. The change to **HIGH LINE INDUSTRIES** is not just aesthetic: it is a statement of what we believe in and where we are going.

From being **hidden suppliers** to becoming **visible protagonists**. From working for others to working **with** others. From executing without identity to competing with **strategy**.

OUR NAME. OUR DIRECTION.

H

HONOR

We act with integrity, respect, and commitment.

L

LEAD

We lead with vision, innovation, and responsibility.

I

INNOVATE

We transform ideas into industrial solutions that move the world forward.

“

*"HIGH LINE INDUSTRIES means building the future with purpose. We are here, **with strength, with vision,** and with industry in our hands."*

”

VALUE PROPOSITION

WE ARE NOT JUST A MACHINE. WE ARE AN INDUSTRIAL PLATFORM.

HIGH LINE INDUSTRIES manages the entire value chain — materials, manufacturing, and integration — to differentiate simultaneously in **price** and **delivery time**, something a job shop simply cannot offer.

CONTROL

BRAND ARCHITECTURE

FOUR UNITS. ONE INTEGRATED SYSTEM.

A modular brand architecture that unifies and strengthens the capabilities of **HIGH LINE INDUSTRIES**, allowing us to scale identity, communication, and positioning in the industrial market.

HIGH LINE
INDUSTRIES

CORE

ELECTRICAL INTEGRATION

Electrical integration: low voltage panels, **CCMs**, distribution systems — with our own line of components.

HIGH LINE
INDUSTRIES

FORM

PRECISION SHEET METAL

Precision sheet metal: laser cutting, CNC bending, welding and electrostatic painting.

HIGH LINE
INDUSTRIES

FLOW

METALS & ALLOYS

Metal commercialization: copper, alloys, aluminum and steel in various presentations.

HIGH LINE
INDUSTRIES

CYCLE

CIRCULAR ECONOMY

Circular economy: collection and recycling of scrap metal that strengthens the supply chain.

CORE

ELECTRICAL INTEGRATION

Low voltage panels, **CCMs** and distribution systems designed, assembled and tested under the highest quality standards.

RELIABLE

Solutions built for continuous operation.

SAFE

Designed to protect people and assets.

CUSTOM

Engineering tailored to your needs.

01

POWERING **INDUSTRY**. CONNECTING SOLUTIONS.

HIGH LINE CORE • PRODUCT

LOW VOLTAGE DISTRIBUTION PANELS.

We design, manufacture and integrate complete LV panels: from the metal enclosure to the energized and tested system. Finished product with **our own brand**, not assembled by others.

UL certified enclosures

Power circuit breaker with electronic trip unit (**ETU**)

Molded case circuit breakers (**MCCB**)

Sized and tinned copper busbars, **in-house**

Control, measurement and signaling panel

IEC 61439-1/2

IEC 60947

NOM-001-SEDE

UL

OUR OWN LINE

HIGH LINE CORE • OUR OWN LINE

ELECTRICAL COMPONENTS BUILT BY HIGH LINE.

Beyond integrated panels, **HIGH LINE INDUSTRIES** manufactures and distributes **our own** electrical components — certified molded case circuit breakers that can be sold separately to integrators and distributors.

MCCB

YCM7 SERIES

Molded Case Circuit Breaker

MODEL

YCM7-250S/3300

RATED CURRENT (I_n)

INSULATION VOLTAGE (U_i)

AC 800 V

IMPULSE VOLTAGE (U_{imp})

8 kV

ULTIMATE SHORT-CIRCUIT BREAKING CAPACITY (I_{cu})

25 kA

CERTIFIED QUALITY

Compliant with international standards for safety and performance.

RELIABLE PERFORMANCE

Built for high protection, durability and long service life.

FLEXIBLE SOLUTION

Ideal for integrators and distributors who need certified components.

READY TO DELIVER

Available for sale and distribution across industrial markets.

HIGH LINE CORE • TOTAL QUALITY

OUR OWN BRAND, DOWN TO THE LAST DETAIL.

Vertical integration is evident in the finish: structure, busbar and enclosure manufactured in-house, with the **HIGH LINE** identity engraved on metal components. OEM quality, complete process control.

OUR OWN LINE |

02

HIGH LINE CORE • TOTAL QUALITY

PRECISION METALWORK

Laser cutting, CNC forming,
welding and coating —
with in-house installed capacity.

HIGH LINE
INDUSTRIES

HIGH LINE FORM • INSTALLED CAPACITY

MANUFACTURING PROCESSES UNDER ONE ROOF.

CUTTING

LASER CUTTING

- 3 fiber laser cutting machines
- 2 × 3 kW + 1 × 4 kW power capacity
- Precision cutting on steel sheet
- Complex geometries and branded embossing

FORMING

CNC BENDING AND FORMING

- CNC press brakes
- High repeatability bending
- Tooling for V and special profiles
- Forming of enclosures and structures

COATING

ELECTROSTATIC PAINTING

- Powder coating booth and system
- Controlled electrostatic application
- Uniform finish and high durability
- Institutional color CFE / RAL by specification

TIG / MIG WELDING

COPPER BUSBAR
ASSEMBLY

ELECTROSTATIC
PAINTING

FINAL ASSEMBLY
AND INTEGRATION

HIGH LINE FORM • SURFACE TREATMENT

FINISH AND PROTECTION FOR EVERY COMPONENT.

ELECTROSTATIC POWDER COATING

Electrostatic application with precise charge control for a uniform film, high transfer efficiency and a durable finish in demanding industrial environments.

COPPER BUSBAR ASSEMBLY **in-house**

Treatment of copper busbars and conductors to improve contact conductivity, prevent oxidation and ensure low-resistance joints — total control of the most critical input for the energized system.

110 kV

SYSTEM PAINTING
CAPACITY*

Cu

IN-HOUSE ASSEMBLY
FOR PROTECTION AND
CONDUCTIVITY

**Technical reference of the coating system.
Configuration according to part and specification.*

HIGH LINE FLOW • HIGH LINE CYCLE

THE COPPER THAT FLOWS AND THE METAL **THAT RETURNS.**

**HIGH LINE
FLOW**

COPPER • ALUMINUM • ALLOY • STEEL

Supply and commercialization of metals that drive electrical integration and manufacturing: control of the most critical inputs in the chain, in different product presentations.

- Copper: bars, plates, wire and conductors
- Alloys to specification
- Aluminum in different presentations
- Steel for fabrication and structures

**HIGH LINE
CYCLE**

CIRCULAR ECONOMY

Collection and recycling of metal scrap that closes the loop: manufacturing waste returns as useful raw material.

- Metal scrap collection
- Classification and processing
- Reincorporation into the value chain
- Reduced environmental footprint and material cost

COMPETITIVE ADVANTAGE

VERTICAL INTEGRATION: *OUR DEFENSIVE MOAT.*

Controlling every link — from raw material to energized system, with in-house logistics — is what allows us to compete in price and speed where others can't.

CYCLE • the material returns to the beginning
